The Watchlist becomes a widget, with alternate, glanceable views of:
- Portfolios
- Themes
- Saved Searches

Portfolio is a collection of Tickers, editable by the Portfolio tab.

(Widgets shows alternate views, so it can only edit display options. Any data editing has to be done someplace else in the system, hence the Portfolio tab.)

Each watchlist row has 2 states: Closed and Open.
The options are persistent and should stay the same on next sessions.
